Take actions! Save our Earth!

Living day by day on Earth, it seems that we, humans, have forgot how to cherish our Earth. We overuse the natural resources, ^{and} even destroy the wildlife for animals. Do you think that we should do something to protect our Earth? Yes, we should!

In the view of lots of protestors, ^{the} public should not produce so much garbage and destroy our Earth. However, there are also a few ways to alleviate the landfill crisis. All of the acts should be taken in our daily life. Every week, the apartments in Taipei could associate with some volunteers who are protecting the environment. Holding a talk is too boring now. They could hold a recycling competition for the public in the apartments. The public need to recycle all the household garbage correctly, including the papers, cans, ^{and} ~~that~~ plastic water bottles. But don't worry about it because all of them are cleaned before this competition. Holding this competition is aiming at educating every residents in the apartment to try to learn how to separate the garbage. Also, the workers would not be tired at separating the garbage. Thus, the landfill would not be overused and it could help produce less rubbish on our Earth.

Moreover, we could settle a garbage robot ^{robot?} in each apartment as many people ~~do not~~ are not willing to reduce rubbish. ~~If they~~ if there is a garbage robot, it would show the residents ~~that~~ the ways to reduce the rubbish and it would also tell them the correct ways of separating the rubbish. It seems that it would be a best way for the residents and they might be interested in it.

Last but not the least, ~~it~~ it is important for every people on Earth to take actions to protect our Earth. ~~The~~ Driving cars, the toxic gases which is produced in factories and taking the act of deforestation, all these human activities ^{are} destroying our Earth. It produces carbon dioxide and it leads to global warming. The whole world would become more worse if human keep taking these activities. ~~The~~ The weather would become extremely hot or cold. The seawater would ^{rise} raise more than 2cm. Afterall, it would be a serious
